

#hackthekitty 2026
Project Report

Project Name: PawPort

Reference ID: 5RFD3DLS

1. Executive Summary

PawPort is a “Pet Resume & Tenant Passport” platform that connects Malaysian cat owners with verified pet-friendly landlords and properties, tackling the critical issue of pet abandonment caused by restrictive housing policies in Malaysia’s urban high-rise communities.

2. Project Overview

2a. Why you're building what you're building

The reality in Malaysia is where countless young Malaysians love their cats but live in high-rise condominiums or apartments where management strictly forbids pets, or landlords refuse tenants with cats. This forces many owners into impossible choices which often lead to pets being abandoned when people are forced to move. PawPort solves this by creating a verified platform where cat owners can showcase their well-behaved, responsibly cared-for cats through “Pet Resumes” and match with property owners who welcome feline tenants.

2b. How it relates to the theme

The hackathon theme “World Cat Domination Day” challenges us to build projects that help cats take over the world in a positive way. PawPort does exactly this by eliminating one of the biggest obstacles to feline world domination: housing discrimination. By ensuring cats can move freely with their owners into any home, we’re helping cats conquer Malaysia’s urban landscape, one apartment at a time.

2c. Target Audience

1. Primary: Malaysian cat owners living in high-rise condominiums or apartments who struggle to find pet-friendly housing
2. Secondary: Landlords and property owners who want to attract responsible, verified pet-owning tenants.
3. Tertiary: Property management companies seeking to implement pet-friendly policies with responsible oversight.

3. Key Features

- ☐ User Authentication: Full login and registration system with password recovery for secure access
- ☐ Cat Profile Creation: Owners can create detailed “Pet Resumes” including:
 - * Vaccination records (with Malaysian vet verification)
 - * Neutering certificates uploads

*"Character references" (ex: previous landlord notes confirming the cat didn't scratch doors or cause odor)

*Cat photos and breed information

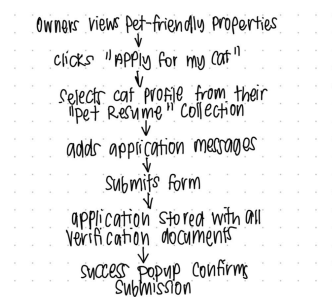

- ☐ Browse Property Listings: View verified pet-friendly properties across Malaysia with details on pet policies
- ☐ Property Details: Full information including rent, pet deposit, max cat allowed, and landlord notes
- ☐ Application System: Submit property applications with a custom message and linked cat profile
- ☐ Success Feedback: Confirmation popup after successful application submission

4. Technology Stack

Layer	Technology
Frontend	HTML5, CSS3, PeaceSans Font, Responsive Design
Backend	Python, Django
Database	PostgreSQL
Templating	Django Template Engine with CSRF Protection
File Uploads	Django File Handling for vaccination records and certificates

5. Technical Architecture

Data Flow

Key Architecture Decisions

1. CSRF protection for all forms
2. File upload support for vaccination records and certificates
3. Template inheritance for consistent UI
4. Mobile-responsive design for Malaysian user on-the-go

6. Testing Matrix

Feature / Flow	Steps	Expected Result	Actual Result	Pass / Fail
User Registration	1. Go to Register page. 2. Fill in form (Username, Email, Phone, Password). 3. Click "Sign Up".	User created and redirected to login.	Registration successful.	Pass
User Login	1. Go to Login page. 2. Enter valid credentials. 3. Click "Login".	User logged in and redirected to browse properties.	Login successful.	Pass
Cat Profile Creation	1. Access "Your Cat" section. 2. Fill in name, breed, age. 3. Upload vaccination record. 4. Add neutering certificate. 5. Upload photo.	Cat profile saved with all documents.	Profile created with file uploads.	Pass
Browse Properties	1. Navigate to main page.	List of pet-friendly properties displayed.	All properties rendered.	Pass
View Property Details	1. Click on any property.	Full details shown: rent, deposit, address, notes.	All fields displayed.	Pass
Submit Application	1. Click "Apply". 2. Select cat profile. 3. Add message. 4. Submit.	Application saved. Success popup appears.	Application created; popup with confirmation shown.	Pass
Application Popup	1. Submit application.	Yellow/orange popup with success message and "Browse more listings" button.	Popup displays correctly with styled button.	Pass

8. Future Improvements

- ☐ Landlord Dashboard: Build a management portal for landlords to review applicants, view cat “Pet Resumes” and approve/deny application
- ☐ Advanced Search Filters: Add filters for price range, pet deposit, and breed restrictions
- ☐ Community Reviews: Allow tenants to leave reviews for landlords and properties
- ☐ Able to apply for multiple cat: Useful for owners with a lot of cats
- ☐ User Dashboard: View application, cats’ profile
- ☐ Functional reset password system: For now only dummy
- ☐ Adding photos function of the properties

9. Tools You Used

- ☐ AI Coding Assistant: Claude (Django/Git setup, debugging, and styling)
- ☐ Development Environment: VS Code
- ☐ Version Control: Git
- ☐ Design Assets: Provided PDF and PNG mockups
- ☐ Font: PeaceSans Webfont

11. Learnings & Takeaways

This Project taught me how to build a complete CRUD application with Django while maintaining a consistent user experience. I learned:

1. How to handle file uploads for documents like vaccination records
2. Implementing conditional template logic (ex: showing success popups)
3. How to use Railways

Most importantly, I learned that technology can solve real social problems such as helping cats and their humans stay together in a housing market that often doesn’t want them.

12. Acknowledgments

1. Hackathon Organizer: For the #hackthekitty event and “World Cat Domination” theme
2. Malaysian Cat Owners: For sharing their housing struggles and inspiring this project
3. The Cats: Who deserve to live anywhere they want
